

# HOW RBE HELPS CHILDREN

## DEVELOP GENIUS POTENTIAL

Humans are born with a supercomputer like brain. Even geniuses use only a miniscule portion of it. It's upto us parents to pull-out the inherent genius of our babies.

## INPUT LOT OF KNOWLEDGE

80% of brain growth happens before the age of 6. As the brain creates excess neurons that are waiting for stimulation to form connections, the brain is in a naturally absorbent stage. Inputting knowledge through flashcards is the easiest way to learn.

## STRENGTHEN THE CORPUS CALLOSUM

Certain activities like eye training, musical training, physical movement and flashcards help strengthen the connection between the two hemispheres of the brain-which enables them to work together.

## DEVELOP HEIGHTENED SENSORY PERCEPTION

The brain has 5 other senses apart from the 5 senses we know of. Popularly known as 'intuition'-older humans relied on this perception. Famous personalities like Steve Jobs & Albert Einstein attributed their success to this trait.

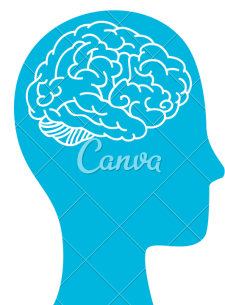

## ENHANCE THE BRAIN CAPACITY

By focusing on certain brain functions, RBE not only enlarges the brain in those areas-but other areas are simultaneously developed as they're all interconnected.

## MAKE LEARNING EASY & FUN

Children who have been exposed to RBE are able to acquire, remember and use new information easily. They are thus more focused, creative and have sharp memories.

ENROL TODAY IN OUR HOME-BASED PROGRAM WHICH REQUIRES 15-30 MINUTES A DAY-SO EVEN THE BUSIEST PARENT CAN DO IT!
